25X1X

1. The Inota power station is supposed to serve industry west of the Danube, and .... especially the Sztalinváros steel combine. Prior to the beginning of 1953 four generators were installed to supply Sztalinváros and the new Inota aluminum factory. Construction is still going on. The big electrical center, two other generators, and two standby generators are still needed.

2. The Inota aluminum combine was begun in 1951 and is to be finished in 1954. In some departments of the combine production began in August 1952. At present there are two buildings operating with 80 or 90 smelting ovens. Daily production is 120 to 130 tons of raw aluminum. Continuous production is maintained by three shifts.

3. Enough more ovens will go into operation to increase daily production to 350 tons of raw aluminum before the end of 1953.

4. The finished aluminum is carried by trucks to the railroad station at Várpalota. About 50 percent of the production is divided between Czechoslovakia and the USSR. The remainder goes to the aluminum rolling mill at Székesfehérvár and other Hungarian factories.

5. Working conditions in the combine are bad, especially with regard to safety precautions and ventilation. Many women are employed.
